## **Forward**

The District Disaster Preparedness and Response Plan, includes the facts and figures that have been collected from various and informal sources with a view to meeting the challenges during any Natural Disaster.

Collection and classification of data are to be updated twice in May and November every year. The plan has been prepared with the following viewpoints.

1. Contingency Plan in a continuous process
2. All are not equal in a crisis situation
3. During relief measures social auditing ensures transparency
4. Involvement of women and PRIs is a must in the entire process.

All are cordially invited for their kind suggestion to be incorporated in the plan.

**Collector and District Magistrate**

**President Zillaparishad**

## CHAPTER –1

### MULTI- HAZARD DISASTER MANAGEMENT PLAN

**1.1 WHY IS IT :** District Disaster Management and Response Plan is mainly to take all preparedness to combat the all possible Disasters in order to save the human life and livestock.

**1.2 OBJECTIVE:** Like other District of the State, more than 60% area is hilly and has good forest coverage. The important hill ranges are Jampui in the South-East of the District in Kanchanpur Sub-Division. It is the highest range in the State, which is approximately 3000 ft. high from sea level. The other hill is Sakhan which divides the Kanchanpur Sub-Division of the District and Longtharai Valley Sub-Division of Dhalai District located in the South-West of the District. The another hill is Shakan which divides the Kanchanpur Sub-Division of the District and Longtharai Valley range is Unokoti which is located in between Kailashahar and Dharmanagar Sub-Division and in Central-Northern part of the District. This hill range is famous for locating less than 1 (one) Crore engraved picture of gods & goddess on the stone, which is a famous tourist spot. All the hill ranges run from South to North. In the extreme South the hilly region can be said the foothills of the Chittagaong hill tracts of Bangladesh. The river Deo that subsequently meets the Manu river at Kumarghat area starts from the Chittagaong hill tracts and flows through the Kanchanpur Sub-Division towards North. The main river Manu comes from the Longtharai Valley Sub-Division and flows towards North and goes to Bangladesh through the Kailashahar Sub-Division. The other two river Longai and Juri also flows from South to North.

As for other parts of the State, though there are good habitations on the tilla land, maximum habitations are on plain and one the riverbanks. It is fact that before 30/40 years, back the river Deo, Manu and Longai used to play vital role for transportation of different goods by locally made boats. Even for few years back the Longai river was used for transportation of rain commodities under PDS from Damcherra to Khedacherra.

Undulating hilly terrain and uneven plains characterize the topography of the District. The soil condition of these hilly ranges is same and composed of gravel mixed with loose soil and laterite type and alluvial in the river valleys and fat lands.

Hot and humid summer with sufficient rainfall between June & October and dry winter characterize the climate of North Tripura District. Rainfall is usually high in the District compared to other Districts in the State. But since last year (i.e. 2008) the amount of rainfall has decreased somewhat. Temperature is generally moderate and mild variations are noticed in various places of North Tripura District. The North Tripura District is situated in intense seismic region, which is placed in the category of Zone – ‘V’.
